FAAC takes part in the R+T Trade Fair in Stuttgart with flexible, customised automation solutions

FAAC is set to present its new products for automatic access control systems at R+T, the international fair for roller shutters, doors/gates and sun protection systems, which will run from 27 February to 3 March 2018.

Stuttgart Trade Fair, Pavilion 8, Stand A31.

Automation systems for FAAC gates: More compact. Faster. More powerful.

At the R+T Trade Fair in Stuttgart, FAAC's star attraction will be the new C851 operator for sliding gates. This technology can move gates of up to 1,800 kg in weight, with a maximum speed of 40 m/min. The compact design and integrated frequency converter control enable the C851 to operate continuously. It is particularly suitable for use in the protection of sensitive areas such as embassies, prisons and police stations.

In addition to the C851 automation system, FAAC will also be presenting a range of other operators for swing and sliding gates for industrial, commercial and private use.

FAAC barriers: Customised solutions for private, industrial and commercial applications

During the fair, several types of FAAC electromechanical and hydraulic barriers will be on display, suitable for customised access control in industrial, commercial and private areas. Key products include the B614 24V automatic barrier - for private and commercial use - and the B680H 24V Hybrid automatic barrier, for industrial use.

FAAC bollards: Secure access control that integrates perfectly into modern environments

FAAC traffic and high security bollards are a reliable means of controlling access routes, and their modern design enables them to be seamlessly integrated into urban environments, where necessary. These automatic and semi-automatic retractable bollards become invisible when required, so public spaces can be opened up to traffic in a simple, flexible manner.

"FAAC safety bollards offer reliable protection against car and truck attacks, and can stop a 7,500kg truck driven at 80Km/h", emphasises Thomas Vogel, CEO of FAAC GmbH. FAAC's high security bollards, which are certified according to international standards, guarantee the necessary degree of protection. In order to obtain international certification, they were subject to special crash testing at independent test institutes.

The compact, robust and attractive design of these bollards helps to enhance the sense of security, without overlooking important aesthetic considerations.

FAAC automatic doors: Convenient access solutions

FAAC has recently expanded its range in the automatic doors sector too, introducing automation solutions dedicated to safety. At the R+T fair, the new FAAC SKR35 armoured anti-burglary automatic entry will be presented, offering performance levels similar to those of a class RC3 armoured door.

FAAC accessories: Functionality meets design

The full range of FAAC accessories will also be on display, conceived by famous designers and expert developers. These include a new code keypad, a wireless keypad, a transponder reader and a flashing LED light, all exhibited alongside the other technologies at the R+T fair.

Other FAAC subsidiaries will also be present at the stand: FAAC BV will exhibit its range of tubular motors, sun protection automation systems and blinds.

DAAB will exhibit high-performance industrial operators for swing gates.

FAAC GmbH is the German subsidiary of FAAC Group, which has its headquarters in Italy. In 1965, in Bologna, Giuseppe Manini founded the Fabbrica Automatismi Apertura Cancelli. Very quickly, the acronym "FAAC" became synonymous with automation systems for vehicle access.
